

A 2-Day Hands-on Workshop for Class 9-12

THE AI SIDEKICK BOOTCAMP

by Career Discovery

Every generation has its defining skill

For yours, It's AI.

The students entering high school today will graduate into a world where AI is not a tool,
It is the infrastructure. Universities abroad already expect it. Indian employers increasingly require it.

The question is no longer whether students will use AI. It's whether they'll use it confidently, responsibly, and creatively or be left behind.

In 14 hands-on hours, the AI Sidekick Bootcamp takes students from curious beginner to confident builder.

*14 hours. 10 tools.
1 working AI Agent.*

AI literacy is now a university admissions differentiator not just a career skill.

WORKSHOP AT A GLANCE

Everything you need to know.

Who	Class 9–12 Students
Format	Hands on, Project-Based
Duration	2 Days x 7 Hours (14 Hours total)
Cohort Size	30 Students
Location	Connaught Place, New Delhi
Date & Time	20 June–21 June, 10am –5pm
Prior Knowledge Required	None
Final Deliverable	1 Working AI Agent + 5-Slide Demo Deck
Certification	Yes, Awarded on Completion
Build Platform	Make.com + Google Gemini API
Tools Covered	10 Leading AI Tools
Meals	Lunch & Snacks Provided Both Days

Structured for beginners, designed to challenge high-achievers. No prior coding, no prior AI experience required. just curiosity and a laptop.

Tools → Prompts → Build → Demo → Certificate

MEET YOUR AI SIDEKICKS

You'll use 10 AI tools.

You'll leave with 10 things you made.

Day 1 is about breadth, confidence, and momentum.

Students kick off with an "AI or Not AI?" quiz voting live on whether celebrity photos, voice clips, songs, and written passages were made by humans or AI. Surprising every time.

From there, the day builds in layers: three mental models that explain how AI actually works, the CIRF prompting framework for writing prompts that get results, and two hands-on Tool Sprint rounds using ten leading AI tools on real academic tasks.

By lunch, every student has five personal artefacts.
By 3:00 PM, ten.

The day closes with a 40-minute AI Hackathon.
six teams, six real-world challenges, one goal:
build the most impressive thing possible. The class
votes. A winner is crowned.

The CIRF Prompting Framework

C – Context: Who you are and what you're working on
I – Instruction: Exactly what you want
R – Role: The expertise the AI should adopt
F – Format: How the output should be structured

THE 10 TOOLS

10 Tools. Real Tasks. In your hands on day 1.

ChatGPT	Build a personalised 7-day revision plan
Claude	Upload a textbook page; get an age-10 explanation
Perplexity AI	AI Research a current event; compare vs. Google
Ideogram	Generate a visual that explains a textbook concept
Google NotebookLM	Turn class notes into quiz questions and audio summaries
Gamma	Auto-generate a 5-slide presentation in under 2 mins
Canva AI	Design an infographic for a cause they care about
Suno AI	Generate a 1-minute song on any subject
ElevenLabs / HeyGen	Create an AI voice clip or talking avatar
Grammarly + Quillbot	Rewrite a paragraph in three different tones

Every tool is introduced with an expert mentor demo, followed by independent, task-driven use. Students don't watch AI, they use it, on tasks they actually care about.

BUILD YOUR AI SIDEKICK

Day 2 has one goal: every team leaves with something that works. Not a concept. A real, functioning AI agent – built, tested, and demonstrated live.

The day opens with 45-second pitch rounds. Mentor approves, refines, and the build begins.

Using Make.com's drag-and-drop interface and Google's free Gemini API, students construct automated workflows – no coding required. Four example builds stay on screen for inspiration throughout:

Study Planner Bot – input a subject and exam date → week-by-week plan.

Daily Habit Bot – personalised morning checklist + evening reflection.

Assignment Reviewer – paste a draft → structured feedback.

Doubt Solver Agent – input a concept → explanation + follow-up quiz.

Why Google Gemini and not OpenAI?

OpenAI requires a credit card to sign up which blocks most school-age students. Google's Gemini API is completely free, requires only a Gmail account, and is accessed via Google AI Studio. Every student can use it independently after the workshop.

THE DEMO DAY

At 3:00 PM, tools down. It's show time.

Each team gets exactly five minutes on stage: three for the slide deck, two for a live demo. Ten teams, one room, energy high from start to finish.

Every demo is scored on four dimensions – Usefulness, Creativity, Clarity, and Depth of AI Integration – by a panel that may include the school principal, an industry guest, or a senior alumni mentor.

Then the room votes.

Five awards are presented:

Best Overall Prototype (Panel Judged)

Most Creative Use of AI (Peer Vote)

Most Likely to Actually be used (Peer Vote)

Best Presenter (Peer Vote)

Audience Favourite (Peer Vote)

THE ETHICS BLOCK

The **AI Ethics block** runs across three pillars, each anchored in live scenarios and peer discussion:

Pillar 1 – Academic Integrity

Where is the line between using AI and misusing it? Students debate real scenarios and leave with their own answer.

Pillar 2 – Bias & Fairness

An image generator is asked to produce "a CEO," "a nurse," "a criminal." The patterns are striking and the conversation that follows is even more so.

Pillar 3 – Privacy & Data

What should you never share with an AI tool? Students find out – live, with real settings, real toggles, real consequences.

Every student leaves with a handwritten Personal AI Code – their own three-rule framework for using AI with integrity.

MEET THE MENTOR

Neeraj Sharma

Full-Stack AI Developer currently building at IntellifyAi, London – specialising in Voice AI agents, intelligent automation, and agentic systems that solve real-world problems.

Previously at Mindcraft Labs, he built and deployed real-time AI agents and automation solutions from concept to live product.

2x National Level Hackathon Mentor at Hack4Delhi and HackCBS.

**He doesn't just teach AI.
He builds it, every day.**

WHAT YOU WALK AWAY WITH

Day 1 Take-Aways

Hands-on experience with 10 leading AI tools - ~10 personal artefacts created during the workshop
Mastery of the CIRF prompting framework - A concrete plan for using AI in school next week.

Day 2 Take-Aways

One working AI agent, built and tested - A 5-slide professional demo deck built in Gamma - Experience presenting to a live audience - A Personal AI Code (ethics card, handwritten)

Post Workshop

Official participation certificate - Printed 30-Day AI Roadmap (week-by-week continuation plan) - Access to the alumni WhatsApp community - One month of mentor availability for questions.

FOR PARENTS: THE BIGGER PICTURE

This isn't a workshop about technology. It's a workshop about confidence.

**Every parent asks the same question:
Will my child actually use this?**

Students don't learn about AI, they create with it, on tasks that already matter to them.

The goal isn't students who know what AI is. It's students who reach for it automatically, use it responsibly, and understand its limits.

**That's the difference between
consuming AI and commanding it.**

ABOUT CAREER DISCOVERY

A profile building and competitions platform that gets students into the world's top universities.

Career Discovery exists for one reason:

to close the gap between what students are taught and what the world actually asks of them.

Ananya Sachdev

Founder of Career Discovery

Meet the Founder

2x EdTech founder. Economics from SRCC, Delhi. Master's in Management from Columbia University. TEDx speaker with experience across India, the US, and Japan. Ananya has built a platform trusted by 20,000+ with a 100% success rate placing students at universities including LBS, Imperial, NYU, CMU, and Johns Hopkins.

Career Paths

Cohort Size: 30 Students

Reserve your Place.

The AI Sidekick Bootcamp runs with a maximum cohort of 30 students to ensure every participant receives dedicated mentor attention during the Day 2 build. Places are allocated on a first-confirmed basis.

What to bring:

A laptop with Chrome, a Gmail account, and a laptop charger. Everything else is provided.
